Abstract. This meta-paper describes the style to be used in articles and extended abstracts for SIBGRAPI. It is actually a compromise between the "classic" SIBGRAPI style, and the IEEE Computer Society Press guidelines. Plain Tex, MS/Word and Latex implementations of the style are available by WWW. Note: authors of accepted papers may get further instructions from IEEE to use other styles and format. Please, use this one instead, even for the camera ready version of your paper.

1 Pages

All papers and extended abstracts submitted to SIBGRAPI, including any supporting documents, must be in English. The main font must be Times 10 point nominal size, with baselines 12 points apart. Knuth's Computer Modern fonts may be used in place of Times.

The text must fit inside a rectangle 17.4 cm x 22.5 cm, without headers or footers. Page numbers must be supressed in the final version. The text must be formatted as two columns 8.3 cm wide, separated by 0.8 cm of blank space.

The first page must display the paper title, the name and address of the authors, and an abstract in English. The title must be centered over the whole page, in 12 point boldface font. Author names must be centered in 10 point font, small caps. Addresses must be centered in 10 point roman font. The abstract must be centered over both columns, in 10 point font, indented 0.8 cm on both sides.

2 Sections and paragraphs

2.1 Sections

Section and subsection titles must be in boldfac, 10 pt, flush left. There should be an extra 12 pt of space above each title, and 3 pt below it.

2.2 Paragraphs

The first paragraph of each section should not be indented. The first line of each subsequent paragraph should be indented by 0.7 cm. There should be no extra space between the paragraphs.

3 Figures and captions

Figures and tables may span one or both columns. Their captions should be centered if less than one line, and justified on both margins otherwise. See Figure 1.

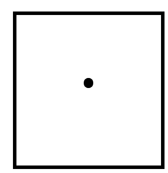

Figure 1: A typical figure.

In tables, do not use colored or shaded backgrounds. Avoid thick, doubled, or unnecessary framing lines. When reporting empirical data, do not use more decimal digits than warranted by their precision and reproducibility.

4 Images

All images and illustrations included in the paper should be in black-and-white, or in gray tones. The image resolution *on paper* should be about 600 dpi for black-and-white images, and 150-200 dpi for grayscale images. Do not include images with excessive resolution, as they may take hours to print, without any visible difference in the result.

5 References

Bibliographic references must be unambiguous and in uniform style. We recommend numbered references in brackets, e.g. Homer [4], Arnold and Gosling [1], or Euclid [2, 3].

Ideally, a sentence should remain grammatically correct if all parts within parentheses or brackets are deleted. This rule applies in particular to reference and equation numbers; so one must not use these tags as sentence words, as in "see [2] for a proof of (3)". If this rule cannot be obeyed, one should at least use the tags only as qualifiers: "see reference [2] for a proof of formula (3)."

6 Templates

Templates and examples for LaTeX and Microsoft Word are available in the SIBGRAPI2002 main site

`http://www.ic.unicamp.br/~sib2002/`

Acknowledgements

We thank all the SIBGRAPI editors and volunteers who contributed to the symposium and to this format over the past 15 years.
